Agenda

Arguments

=====

(Michel) Change the Schema for the Arguments changes

(Andreas) Change the Spec for the Arguments

Arguments Example

```
<Arguments>
```

```
  <Argument>xsd:string</Argument>+
```

```
  ...
```

```
</Arguments>?
```

Versioning

=====

Michel will write a proposal and send to the GGF Editor. Andreas will put him in touch with Greg.

Storage/bandwidth units

=====

At the moment, we use a mixed set of units. SI defines two distinct sets of units: One based on 10, and one based on 2 (adopted by the IEC), having the 10 based units the normal prefix (like k, M, G, T, P and E) and the 2 based units the prefixes ki, Mi(!), Gi, Ti, Pi and Ei.

I propose to use the SI units.

UR schema example (perhaps obsolete)

<http://www.psc.edu/~lfm/Grid/UR-WG/urwg-schema.11.xsd>

Actions

Michel - update schema with "argument" issue and "units" issue

Andreas - update spec with changes from Michel and update "processTopology"

All - to seek out help with parallel job descriptions for "processTopology" section.

Andreas to create JSDL post v1 tracker > Done

https://forge.gridforum.org/tracker/index.php?func=browse&group_id=122&atid=784
